

ID Natural Language

- Information on the nature of blood donation is provided to the donor before their consent can be obtained. If the donor does not consent, the process has to terminate.
- R1 After the blood collection, the donor should be monitored for the duration of the bleeding. If this monitoring takes more than 15 minutes a physician needs to assess the donor.
- R2 Whichever resource executed the preparation for venepuncture, should also conduct the venepuncture.
- R3
